

Explainability Report

We report the following SageMaker analysis.

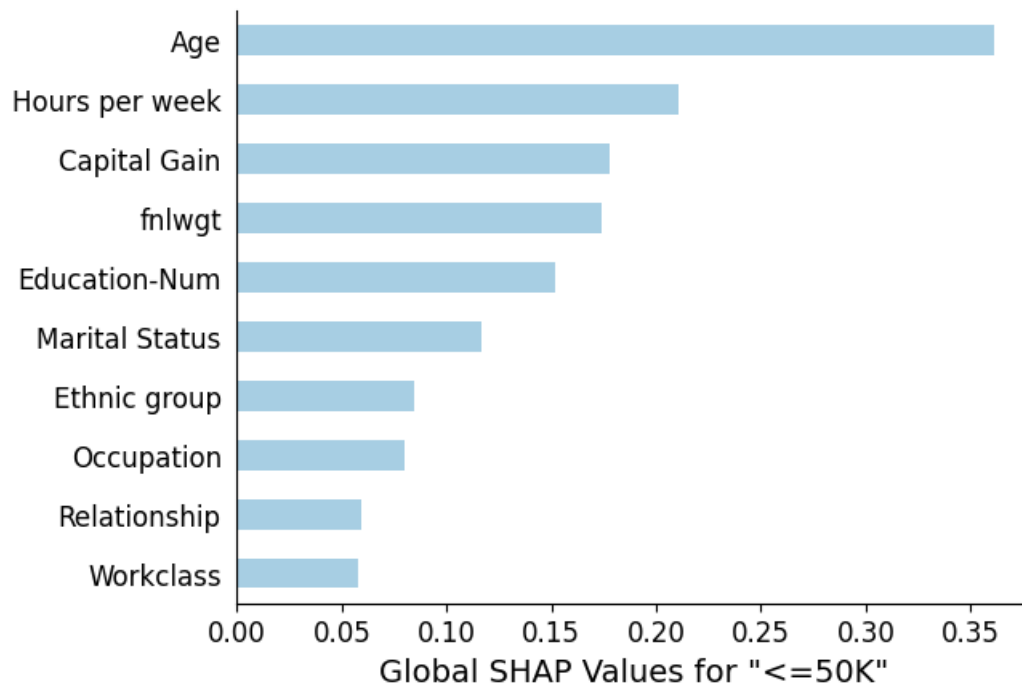

Explanations for all labels

The Model has 14 input features and 4 output labels. We computed KernelShap on the dataset and display the 10 features with the greatest feature attribution summed up over all the labels.

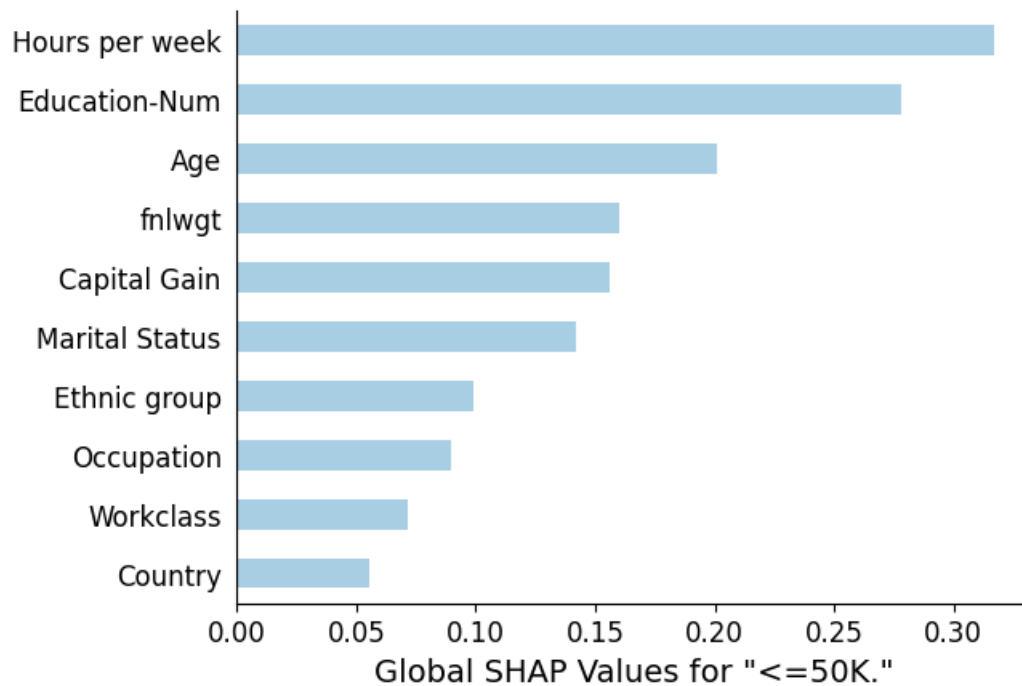

Explanations for "<=50K"

The Model has 14 input features. We computed KernelShap on the dataset dataset and display the 10 features with the greatest feature attribution.

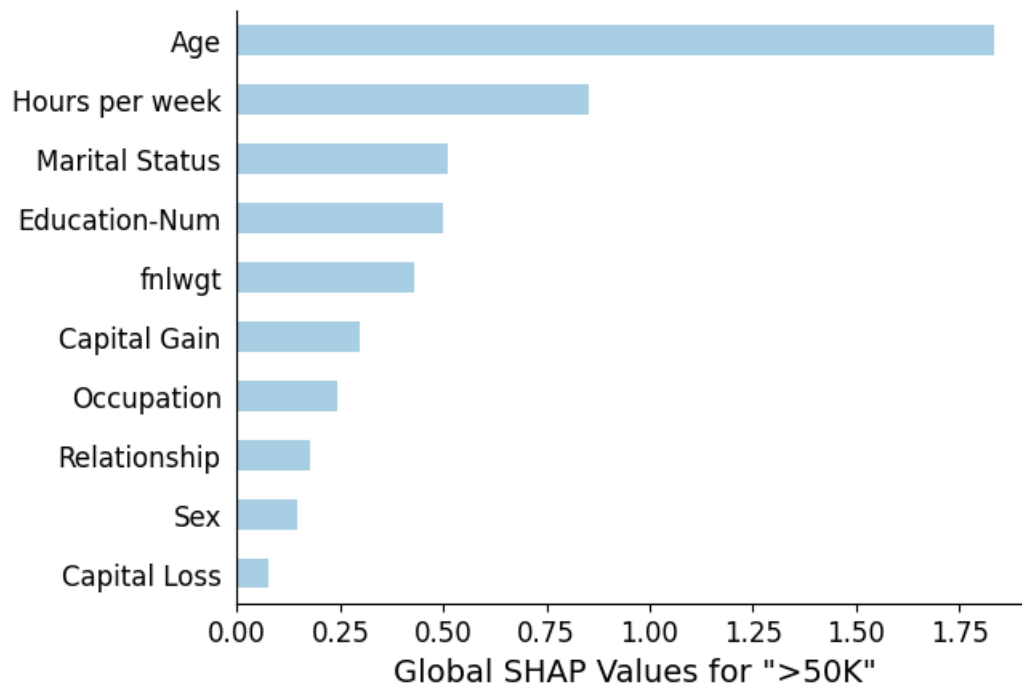

Explanations for "<=50K."

The Model has 14 input features. We computed KernelShap on the dataset dataset and display the 10 features with the greatest feature attribution.

Explanations for ">50K"

The Model has 14 input features. We computed KernelShap on the dataset dataset and display the 10 features with the greatest feature attribution.

Explanations for ">50K."

The Model has 14 input features. We computed KernelShap on the dataset `dataset` and display the 10 features with the greatest feature attribution.
